

MODEL BFT-1

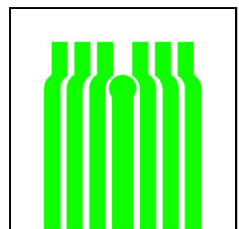

Bell, Flare, Trim Tool

The **BFT-1** is a multi step tool that combines three tools into one. The tool can be used in conjunction with an array of drivers, from a conventional electric drill motor to a multi head spindle mounted on an X-Y axis table.

The tool forms a bell for insertion of a return bend or inlet/outlet tube, then forms the flare for good solder filler, and then trims the tube to length for the proper extension from the end sheet.
